

# ISARIC WHO Clinical Characterisation Protocol for Severe Emerging Infections UK (CCP-UK) CASE REPORT FORM GUIDANCE FRONT PAGE 1 of 4

### V10.4 28/10/2021

### **DESIGN OF THE CCP-UK CASE REPORT FORM (CRF)**

This CRF is divided into a "ADMISSION" form (4 pages), a "DAILY" form (1 pages) for daily clinical and laboratory and data, an "OUTCOME" form (4 pages) and a "WITHDRAWAL" form (1 page).

#### **HOW TO USE THIS CRF**

The CRF is designed to complement the **Tier** of activity that a site has capacity and capability to work to. This is likely to vary over the course of an outbreak. The decision on which **Tier** to use is up to the Local Principal Investigator.

Data can be collected as Tier Zero activity without consent including retrospectively and from deceased cases.

#### **IMPORTANT CHANGES**

## Tier Zero sites

Please enrol all cases for admissions who are proven positive (positive test) with COVID-19/ SARS-COV-2 and <u>any exposure of Public Health Interest as notified by a public health agency (PHS or UKHSA)</u>

- Please enrol all admissions on and after 1<sup>st</sup> October until next notice.
- Please complete the **ADMISSION CRF** and **DAILY CRF** for the first day of hospital admission (day 1), the **DAILY CRF** again for the first day of any ICU admission, then the **OUTCOME CRF** at day 28, discharge, or death (whichever occurs first)
- For patients receiving Casirivimab/imdevimab (Ronapreve), Tocilizumab, or Sarilumab, please complete an extra DAILY CRF for first day that such a drug is dosed and for day 14 after drug initiation (if patient remains admitted). Collection of this data is requested by the CMOs in all nations. Remdesivir is now a standard of care so should be recorded in the OUTCOME form in the MEDICATION section.

### Tier 1

For all sites please sample the following cases of interest only where instructed by the CCP study team

- Variants of concern (VOCs) or Variants of interest (VOIs) or
- Any pathogen of public health interest or
- Any person exposed to noxious agent or harmful energy.

On each page above here write site code & participant number as per this example (participant number can be 4 or 5 digits depending on number of recruits)

### **CASE REPORT FORMS**

#### **FRONT PAGE 2 of 4**

#### **GENERAL GUIDANCE**

- The CRF is designed to collect data obtained through examination, interview and review of hospital notes. Data may be collected retrospectively if the patient is enrolled after the admission date or deceased after admission.
- Participant Identification Numbers consist of a 5-digit CPMS / ODS site code and a 4 or 5-digit participant number. You should obtain a site code by contacting your local R&D office or CCP@liverpool.ac.uk
- Participant numbers should be assigned sequentially for each site beginning with 0001. In the case of a single site recruiting participants on different wards, or where it is otherwise difficult to assign sequential numbers, it is acceptable to assign numbers in blocks. E.g. Ward X will assign numbers from 0001 onwards and Ward Y will assign numbers from 5001 onwards. Enter the Participant Identification Number at the top of every page.
- Please generate a new subject ID for each re-admission
- CRF data should be entered to the central database at https://ncov.medsci.ox.ac.uk
- REDCap registration access is obtained by contacting <a href="mailto:ccp.REDCap@liverpool.ac.uk">CCP.REDCap@liverpool.ac.uk</a>
- Please contact us at CCP.REDCap@liverpool.ac.uk for help with database problems.

#### **RULES DEFINING DAYS**

- 1. Day of Admission = Day of Admission regardless, e.g. even if admitted 2 months ago for a broken hip.
- 2. For Community Acquired COVID-19 i.e. admitted with symptoms consistent with COVID-19, day 1 = first 24 hours of admission.
- 3. For those who are already admitted for any other reason and who subsequently test positive, day 1 = day the positive COVID-19 test was collected.
- 4. Rules 2 and 3 are important but we recognise that start of biological sampling for Tier 1 and 2 may be deferred or delayed for several reasons, e.g. due to a delay in the COVID-19 result being reported. If this happens, please take the d1 sample set as soon as possible and then d3 and d9 according to schedule, or as close as possible.
- 5. For Tier Zero date of enrolment is date on which the act of data collection started (no consent). For Tier 1 & 2 date of enrolment is date of consent.

#### CASE REPORT FORMS

#### **FRONT PAGE 3 of 4**

- ➤ Ideally complete every line of every section, except for where the instructions say to skip a section based on certain responses. This may not be possible in surge conditions.
- Selections with square boxes ( $\square$ ) are single selection answers (choose one answer only). Selections with circles ( $\mathbf{o}$ ) are multiple selection answers (choose as many answers as are applicable).
- Some fields are considered **URGENT AND ESSENTIAL**. These are marked **BOLD AND UNDERLINED**IN ALL CIRCUMSTANCES PLEASE PRIORITISE THESE DATA POINTS FOR URGENT UPLOAD.
- Mark 'N/K' for any results of laboratory values that are not known or not available.
- Avoid recording data outside of the dedicated areas. Sections are available for recording additional information.
- We recommend writing clearly in black ink, using BLOCK-CAPITAL LETTERS.
- Place an (X) when you choose the corresponding answer. To make corrections, strike through (-----) the data you wish to delete and write the correct data above it. Please initial and date all corrections.
- In the case of a participant transferring between study sites, such as to a Nightingale Hospital, or other surge facility, it is preferred to maintain the same Participant Identification Number across the sites. When this is not possible a new Participant Identification Number should be assigned, the transferred participant will be linked by their identifiable data.
- > Please keep all of the sheets for a single participant together e.g. with a staple or participant-unique folder.
- > These four **FRONT PAGES** do not need to be retained.
- NEVER SEND CRFs to anyone by unsecure email or post.
- See the training guide on how to send consent to CCP@liverpool.ac.uk using [SECURE] encryption
- ➤ The Dalhousie University Clinical Frailty Score is provided below for your reference.

#### Clinical Frailty Scale\*

I Very Fit – People who are robust, active, energetic and motivated. These people commonly exercise regularly. They are among the fittest for their age.

2 Well – People who have **no active disease** symptoms but are less fit than category I. Often, they exercise or are very **active occasionally**, e.g. seasonally.

3 Managing Well – People whose medical problems are well controlled, but are not regularly active beyond routine walking.

4 Vulnerable – While not dependent on others for daily help, often symptoms limit activities. A common complaint is being "slowed up", and/or being tired during the day.

5 Mildly Frail — These people often have more evident slowing, and need help in high order IADLs (finances, transportation, heavy housework, medications). Typically, mild frailty progressively impairs shopping and walking outside alone, meal preparation and housework.

6 Moderately Frail – People need help with all outside activities and with keeping house. Inside, they often have problems with stairs and need help with bathing and might need minimal assistance (cuing, standby) with dressing.

7 Severely Frail – Completely dependent for personal care, from whatever cause (physical or cognitive). Even so, they seem stable and not at high risk of dying (within ~ 6 months).

8 Very Severely Frail — Completely dependent, approaching the end of life. Typically, they could not recover even from a minor illness.

9. Terminally III - Approaching the end of life. This category applies to people with a life expectancy <6 months, who are not otherwise evidently frail.</p>

#### Scoring frailty in people with dementia

The degree of frailty corresponds to the degree of dementia. Common **symptoms in mild dementia** include forgetting the details of a recent event, though still remembering the event itself, repeating the same question/story and social withdrawal.

In **moderate dementia**, recent memory is very impaired, even though they seemingly can remember their past life events well. They can do personal care with prompting.

In severe dementia, they cannot do personal care without help

CASE REPORT FORMS

**FRONT PAGE 4 of 4** 

#### **GENERAL GUIDANCE**

#### **Definitions:**

#### **INFLAMMATION** - Children and adolescents

WHO preliminary criteria Multisystem inflammatory syndrome in children and adolescents temporally related to COVID-19

Children and adolescents 0–19 years of age with fever > 3 days

AND any two of the following:

- 1. Rash or bilateral non-purulent conjunctivitis or muco-cutaneous inflammation signs (oral, hands or feet).
- 2. Hypotension or shock.
- 3. Features of myocardial dysfunction, pericarditis, valvulitis, or coronary abnormalities (including ECHO findings or elevated Troponin/NT-proBNP),
- 4. Evidence of coagulopathy (by PT, PTT, elevated d-Dimers).
- 5. Acute gastrointestinal problems (diarrhoea, vomiting, or abdominal pain).

#### AND

Elevated markers of inflammation such as ESR, C-reactive protein, or procalcitonin.

#### AND

No other obvious microbial cause of inflammation, including bacterial sepsis, staphylococcal or streptococcal shock syndromes.

#### **AND**

Evidence of COVID-19 (RT-PCR, antigen test or serology positive), or likely contact with patients with COVID-19

### **INFLAMMATION - Adults**

We deliberately do not give criteria to avoid selection bias. Adults with an inflammatory should to be identified at clinical discretion.

If you think a patient meets these criteria or wish to discuss, please call 0300 365 4423.

#### **RE-INFECTION**

To be considered a suspected Covid-19 re-infection the patient should meet one prior Covid-19 criterion and one timing criterion. If you think a patient meets these criteria or wish to discuss, **please call 0300 365 4423**.

Prior Covid-19 criteria

- A positive test for virus (PCR or antigen) or antibodies, in the community or in a hospital. Evidence of this can be from the patient's own recollection, or from medical records.
- Patient-reported symptoms strongly suggestive of Covid-19, including cough, fever and altered taste/smell
   Timing criteria
- If the patient was previously hospitalised with Covid-19, they must be more than 28 days from discharge from acute hospital (not including rehabilitation hospital).
- If the patient was not hospitalised but had symptoms of Covid-19, they must be more than 28 days from last symptoms.
- If the patient did not have symptoms, they must be more than 28 days from their last positive Covid-19 test.

#### **VACCINE FAILURE**

Admission with Covid-19 more than 28 days after vaccination. Please call 0300 365 4423.
